

## GUIDELINES FOR THE AUTHORS

“Meat Technology” is a scientific journal which publishes:

1. Original scientific papers (papers which present previously unpublished results of authors' own investigations using scientific methodology);
2. Review papers (papers which include original, detailed and critical overview of a research problem or an area to which the author has significantly contributed, as evidenced by auto citations);
3. Brief or preliminary papers (full-format original scientific papers or of preliminary character);
4. Reviews (of books, scientific conferences etc.)

Papers will be published from the following scientific disciplines: meat hygiene and technology, technology of by-products in meat industry, hygiene and technology of animal originating foodstuffs, technological microbiology, methods of food preservation, microbiology of animal originating foodstuffs, chemistry of animal originating foodstuffs, quality and safety of animal originating foodstuffs, quality and safety of feedingstuffs, et sim.

Eligible for publishing are those papers, which have not been previously published, presented or considered for publication in another journal, except as abstracts presented at scientific conferences. The first author is both responsible for meeting these criteria and for obtaining agreement to publish from all of the co-authors.

### **Procedure**

Papers are subject to anonymous reviews (two at least), while the decision to accept the paper for publishing is reached by the editor-in-chief, together with the members of the editorial board.

Accepted papers are subject to proofreading. The editorial board reserves the right to minor corrections of the manuscript. Where major corrections are necessary, the first author will be notified, and the paper sent for revision, with a set deadline.

### **Language**

Papers are published in Serbian or bilingually – in Serbian and in one of the second languages (English, German, Russian or French). If the papers are printed in Serbian, their summaries (1/10 of the paper length) are published in English. If the papers are printed in English or another language other than Serbian, their abstracts are printed in Serbian and English.

### **Editing of the manuscripts**

The paper should be edited in Microsoft Word software, using Times New Roman font, size 12 pt, paragraph spacing 1.5 and margins of 2cm. Papers are submitted on CD or in other electronic form. The text should be clear, concise, grammatically correct and should contain the following sections:

The title (lowercase, bold, font size 14 pt). Below the title, names of the authors (last, first, lowercase, italic, font size 12 pt). Numbers following names in superscript refer to the authors' institution. At the bottom of the first page, according to the number in superscript, name and address of the institutions authors are employed in should be given (italic, font size 10 pt). In the new line, the name and e-mail of the corresponding author should be provided.

Abstract should contain 150-250 words with key words (maximum 10) in Serbian or the language of the paper. The abstract should be typed below the title and names of the authors.

Summary represents short, informative description of the paper content written in Serbian and/or English, depending on the language of the paper. Summary enables insight in the aim of the investigations, methods, results and conclusion. It should contain up to 500 words (italic, font size 12 pt) and should be placed at the end of the paper, after references.

Key words are terms that best describe the content of the paper. Maximal number of key words is 10. They should be given in the same languages as summaries, below the summary text (italic, font size 12 pt).

Abstract and summary must not contain abbreviations. If the abbreviation is used for the first time in the text, full name should also be provided. In the latter text, the abbreviation can be used alone.

The original scientific paper should contain the following chapters: introduction, material and methods, results and discussion (combined or separate), conclusion, notes (optional) and references. Chapter names are typed in lowercase, font size 12, bold.

1. Introduction: should contain clear description of the investigated subject and aim of the research with the short citations of the relevant literature (not more than 10 years old);
  2. Material and methods: this chapter describes material and methods used and outlines the design of the experiment;
  3. Results and discussion: The results should be processed by statistical methods appropriate to the experiment; they should be clear and concise using tables, graphs, photographs, illustrations and other. The same result should not be presented through both table and graph. Discussion should be related to presented results avoiding repetitions of already stated facts, using comparison of obtained results and relevant literature data related to similar group of products, comparable analytical method et sim.
- When in the text, literature is cited by giving author's last name, last name with "and", if the cited literature is published by two authors, or, in the case of more than two authors by "et al." abbreviation after the surname of the first

author (*italic*). Cited literature with the year of publishing should be in brackets.

- Figures and illustrations are numerated with the same number as given in the text of the paper. Titles of the tables are written above the tables; titles of the graphs and illustrations are printed below (in lowercase). Table titles and content should be written bilingually (the other language is always English). Tables, graphs and figures are submitted separately, in the appendix.
  - If tables, graphs or figures originate from other sources, the author is required to state the source of such data (author, year of publishing, journal etc.). Notes should be placed at the bottom of the page containing cited material.
  - The author should apply the International System of Units (SI system) and current regulation on measuring units and measuring instruments.
4. Conclusion: provides the review of the most important facts obtained during the research.
  5. Note (acknowledgement): should contain title and number of the project i.e. title of the program from which is the research carried out and described in the paper, as well as the name of the institution that funded the project or program. All this is stated at the bottom of the first page of the paper.
  6. References: should be given in alphabetical and chronological order as follows: last name of the author, first name initial, year of publication (lowercase, font size 12 pt, bold), following by the full title of the reference, name of the journal or other source, journal's volume, number, and pagination of the paper.
